GLIP, LED LIGHTS TO THE ECO-LIVING

GLIP lights the eco-projects of Cibicworkshop, Studio Marco Piva and Marchingenio, shown at Green Home Design – Made Expo, Fiera Milano 17 - 20 October, 2012.

It is signed by GLIP the led lighting system of the eco-housing projects at Green Home Design, Made Expo, Milan: "Coltivare Una Casa" by Cibicworkshop, "Space For Life" by Studio Marco Piva and "Green Kinder House" by Marchingenio.

GLIP led lights are utilized in these concepts of living by an evolved idea of "green" that uses new technologies to maximize performance and efficiency, but also aesthetics, comfort and well-being of living.

This is a further confirmation in the eco-logic perspective for GLIP, a collaboration with the well-known names of Italian architecture and design, involved in testing and use of high-tech materials for sustainable development.

In the same perspective, GLIP has illuminated Casa delle Bottere (Treviso), awarded the Casa Clima Oro certification, an important prize given to less than 100 buildings throughout Italy, and has realized lighting projects as for the Unipol (Bologna), LEED Gold certification in progress.

This is an interpretation of ECO as opportunity and progress, as a place where reconsider the terms of living and the relationship with the environment.

In this perception, living gains an extra value, becoming eco-evolved.
